FACIAL REJUVENATION AT REVA

Reva, the only clinic in Delhi offers Scientific Facial Assessment (SFA) based treatments to ensure desired outcome.

What is Total Facial Rejuvenation?

We at Reva, have a scientific approach towards facial assessment. We do a Scientific Facial Assessment (SFA) of clients, and based on that, we decide which area of the face requires intervention and improvement. SFA is a technique by which the face is measured and evaluated for proportion and to determine whether the Golden Ratio (PHI) is maintained or not. The Golden Ratio or PHI is the mathematical formula wherein 1:1.618 ratio is measured in various facial features. Even the human face has a golden ratio and this is why some faces are more attractive, visibly pleasant than others. For example, for the perfect lips, the ratio of the upper to lower lip should be 1:1.618 with the lower lip being slightly larger than the upper lip. It's surprising, how a minor change can enhance appearance and attain that perfect golden ratio.

What are the latest trends in Total Facial Rejuvenation?

There has been a shift from only treating the face in individual parts to a holistic today, treatments are planned for rejuvenation of the skin, re- contouring and wrinkle management.

What can be achieved with this treatment? And are there any side effects?

We can make a jaw line more prominent, accentuate and contour lips, eyebrows shaping, narrowing of the lower face bulk, chin reshaping and elongation, nose reshaping and reducing fine lines and wrinkles. The side effects are very minimal. There could be some redness and swelling which subsides in a couple of days.

How is the treatment done?

Fillers and Botox are injected to create the ideal proportion of the facial parts. There are different varieties of fillers; some are more robust for lifting like Juvederm Voluma™, others are finer for filling lines Juvederm Ultra Plus™ and there are specific fillers for lips Juvederm Ultra™. Depending on the SFA, the variant and quantity of the filler is decided and integrated under the skin. Dynamic lines are treated with Botox.

How long does the procedure take?

The procedure takes a mere 10-45 minutes with no downtime and near immediate results. 60 % of results are

instant and the rest comes when the fillers integrate with the tissue. Clients get complete results in 15 days which is subtle, natural and aesthetic. It is a single sitting procedure with a review (fine tuning) after 15 days.

How much would a procedure like this cost?

Depending on the desired result and requirement, the cost could vary from Rs.35,000 to Rs.2.5 lacs.

Dr. Reema Arora,
Senior Consultant,
REVA

- National and international trainer in BOTOX® and Fillers. Credit of training over 500 Dermatologists and Plastic Surgeons in the art of facial rejuvenation with injectables.

- Part of the National Consensus

on the dosage of Botox at various sites, March 2008.

- Conducted the first Cadaver Workshop in Aesthetics in India in September 2013 to revisit anatomy.
- Has conducted two RTM discussions with Indian doctors in aesthetics in New Delhi.
- Is writing two textbooks on the Indian Injectable Experiences.
- Has attended various National and International Aesthetic Conferences.
