TIME TO SAY GOODBYE TO FAT

At Reva, an aesthetics clinic in Delhi, you can now get rid of your muffin tops and love handles, thanks to Coolsculpting.

Tell us something about Coolsculpting.

Coolsculpting or fat freezing is a non surgical procedure that uses patented cooling technology to treat stubborn fat bulges in our body that do not respond to diet or any form of exercise.

On which parts of the body is Coolsculpting most successful?

Coolsculpting works best on abdominal fat, love handles, back flab, bra bulges, bulky arms and inner thigh bulges

Is the procedure painful?

The first five minutes of the procedure can be a little uncomfortable but otherwise it is quite bearable. Patients can lie quite comfortably during the procedure.

How soon can one expect results?

You may start to see changes as early as 3 weeks after your treatment but most dramatic results are visible 2 months after the procedure.

How safe is the procedure?

It has been cleared by the United States' Federal Drug Administration (FDA). With over 1 million Coolsculpting procedures worldwide, it is proven to be safe & effective!

Dr. Aarushi Passi Cosmetic Physician, REVA

- MBBS, Cosmetic Physician (B.F.U.H.S., Punjab)
- Ex Regional Head, Punjab Zone, VLCC Health Care
- Ex Consultant, ARV Aesthetics, Ludhiana
- Ex Associate Doctor, Blush Clinics, New Delhi

REVA

You may start to see changes as early as 3 weeks after your treatment but most dramatic results are visible 2 months after the procedure.

How safe is the procedure?

It has been cleared by the United States' Federal Drug Administration (FDA) for its long term safety. With over 1 million Coolsculpting procedures worldwide, it is proven to be safe & effective for non surgical Fat reduction!

Does Coolsculpting work better than other modalities for fat reduction?

And how long do the results last?

Other modalities such as lasers, radiofrequency and focused ultrasound don't just affect fat cells but may also affect adjoining tissue with the waves penetrating the treated body tissue in an undesirable way. Liposuction, in comparison, is more painful, riskier and has a longer recovery time. The results for Coolsculpting are long lasting because once the fat cells are eliminated, fat will never deposit again in the treated area.

TIME TO SAY GOODBYE TO FAT

At Reva, an aesthetics clinic in Delhi, you can now get rid of your muffin tops and love handles, thanks to Coolsculpting.

No needles, no special diets, no supplements and most of all, little to no downtime means its safe for all skin types.

Does Coolsculpting work better than other modalities for fat reduction? And how long do the results last?

Other modalities such as lasers, radiofrequency and focused ultrasound don't just affect fat cells but may also affect adjoining tissue with the waves penetrating the treated body tissue in an undesirable way. Liposuction, in comparison, is more painful, riskier and has a longer recovery time. The results for Coolsculpting are long lasting because once the fat cells are eliminated, fat will never deposit again in the treated area.

How often do you treat males with Coolsculpting?

Most men crave for V-shaped torsos. Majority of the men that come to us are concerned about their side flabs/flanks, in addition to lower belly bulges. Another group of patients come with unwanted chest fat or male breasts (non hormonal causes).

Tell us something about Coolsculpting.

Coolsculpting or fat freezing is a non surgical procedure that uses patented cooling technology to treat those stubborn fat bulges in our body that do not respond to diet or any form of exercise. It gently cools the unwanted fat cells in the body to induce their natural, controlled elimination without affecting any of the surrounding tissue.

On which parts of the body is Coolsculpting most successful?

Coolsculpting works best on abdominal fat, love handles, back flab, bra bulges along with bulky arms and inner thigh bulges. Areas which are a common concern for women, even those who are lean.

Is the procedure painful?

While the first five minutes of the procedure can be a little uncomfortable, it is quite bearable. You can lie comfortably, read, work on your laptop or even doze off!

How soon can one expect results?

You may start to see changes as early as 3 weeks after your treatment, but most dramatic results are visible after 2 months. These continue to improve for 4 -6 months after the procedure.

How safe is the procedure?

It has been cleared by United States' Federal Drug Administration (FDA) for its long term safety.
