DID SOMEONE SAY PERMANENT MARKS?

Reva's latest technology is the solution to facial marks. Now, you no longer need to live with them. Say hello to a confident you!

Vbeam Perfecta is the latest and safest Pulse Dye Laser from Candella. It reduces the discomfort that the patient experiences and is not messy (no cold gel is required). This laser delivers wavelengths of 895 nm that penetrates deep into the skin, heats the blood vessels and then shrinks them. And topical anesthetic cream is applied before every procedure to avoid any discomfort. The best part: post procedure, only little redness remains which fades thereafter. Still hesitant? Our expert, Dr Shubhangi Perkar answers some of your questions.

My child is 9 years old and has been diagnosed with infantile haemangioma (red birth mark). We treated it but now he has residual redness and a few small red nodules too. How do we treat those?

For residual redness and nodules, Vbeam Perfecta is actually perfect. This latest technology can treat the condition in 3 to 6 sittings and with minimal pinpoint bleeding.

I am a 20-year-old woman and I've had a large pink patch on the left side of my face since birth. I'm now getting married and want to get rid of this patch. Please help me.

This pink patch could be 'port wine stain', which is not just permanent but it may also increase in size and thickness. With Vbeam Perfecta the redness and size will shrink in 4 to 8 sittings.

I have had Rosacea (red cheeks and chin) for the last 10 years. Though I have avoided an outdoor lifestyle, I still have these tiny permanent blood vessels visible on my face. Can these be treated? And if so, will the treatment be painful?

It's good to hear that you have avoided the triggering factors. Persistent visible blood vessels indicate stage 2

Rosacea which can be treated with Vbeam Perfecta in 2 to 3 sittings. While maintenance sittings will be required every 6 months along with some topical medications, your condition can be treated.

Can small thread leg veins on ankles and the back of my thighs be treated?

Leg veins could be caused by obesity, underlying varicose veins, prolonged standing and pregnancy. So treating the underlying cause can prevent further development of leg veins but existing ones can be taken care off with Vbeam Perfecta in a period of 6 to 8 months.
